UN CLIMATE TREATY (UNFCCC), Greenhouse gas data sources:

United Nations Development Programme, Human Development Index, 2022

Global Carbon Budget 2023v1, Territorial emissions 1850-2022

Global Carbon Budget 2023v1, Consumption emissions, * consumption emissions are not known and territorial emissions are used (74 nations, 3.7% of total emissions, 8.9% of population).

Intergovernmental Panel on Climate Change, AR6, WG1, Climate Change (2021) The Physical Science Basis. Table 5.8: Assessed remaining carbon budget. The remaining Carbon Budget (83% probability) to limit global warming to 2°C / 1.5°C (compared to 1850-1900) is 900 / 300 GtCO2 by 1/1/2020, or 860 / 260 GtCO2 by 2021, with no overshoot and no negative emissions. 90% of budget allocated to fossil fuel emissions and cement equals 760 / 230 GtCO2 from 2021 onwards. Human population in 2021 is 7.9 billion (UN World Population Prospects – 2021 revision). 760 / 230 billion tonnes of CO2 divided over 7.9 billion people is 96 / 29 tonnes CO2 / capita. When a nation's emission limit for 2°C / 1.5°C has been exceeded, the excess amount of CO2 per capita by the end of 2023 is given; to be on-limit the excess should be removed from the atmosphere.
